

PROBLEMS FACING THE BUSINESS WORLD TODAY

The start of this millennium has produced greater changes in terrorist activity and the need for security at every level of business. Corporate information and company assets are more valuable and more vulnerable than ever. We now have to focus on the key survival factors to ensure security of the business.

All businesses are suffering increased risk of loss through theft, vandalism, terrorism or industrial espionage. Now, by law, under the Sustainable and Secure Buildings Act, developers and directors must use physical security and develop contingency plans to mitigate against loss of life resulting from fire, accident or deliberate sabotage and can be held personally liable.

Experience, however, shows that companies often do not consider and confront these challenges head on, failing to eliminate the problem by under-estimating the bottom-line value of long term security plans.

Achieving security requires a commitment from the top as well as resources. Too often security is left as a side issue in the hands of relatively junior managers. By viewing it as a charge against the 'bottom line' the balance of risk against resource is rarely made. Sadly, security was seldom seen as an ability to earn revenue for the company but rather as a cost. During the last three years however the attitude has started to change.

WHAT IS SCI?

Security Consortium International is a group of 22 independent consultants who work together to provide solutions to a wide range of security problems. They operate across all sectors of industry and commerce as well as for government installations, public buildings, royal residences and private individuals both in the UK and worldwide.

Each consultant is an expert in their chosen specialist area of security. This enables SCI to provide a total solution to any problem situation.

SCI is structured around the belief that the most important asset we contribute is the ability to help our clients pre-empt and avoid potential disruption to their business. A lot of our work is carried out on drawings at the initial development stage.

SCI'S OBJECTIVES

SCI is committed to provide its clients in the corporate, government and private sectors with a wide range of high quality, pro-active and reactive risk management, IT, communications and security consultancy services especially for the buildings, banking, aviation, oil and gas and ports sectors.

We advise our clients worldwide how to reduce and manage the effects of crime, fraud, fire, crisis, terrorism, IT and communications interception on their business operation and employees.

We operate to the highest levels of integrity, legality and ethics and have constantly developed long term relationships with our clients.

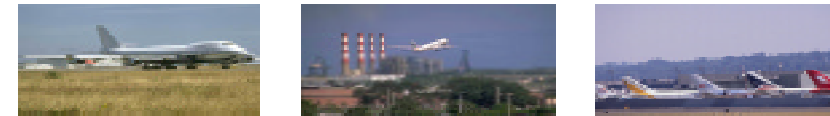

SCI DELIVERS:

Political and Quantitative Risk Analysis
Security Audits and Design
Security Specifications
Security Project Management
Disaster Recovery and Business Continuity
Communications Security

A total turnkey solution to your problems not just a 'report'

PROBLEMS THAT SCI CAN SOLVE FOR ITS CLIENTS

- Problems with physical security, access control and CCTV surveillance.
- Terrorism, crisis, crime, theft and drugs in the workplace.
- Business continuity plans, disaster recovery and resilience.
- IT security, anti-hacking, firewalls and network protection.
- Assisting the Board with crisis management and executive protection.
- Terrorism direct against oil, gas, aviation and port facilities.
- Communications security and countereavesdropping.

SKILLS

The Consortium has over 60 consultants and specialists with an aggregate of over 1000 years of experience of providing unusual security solutions throughout the modern world. These consultants are all, without exception, experienced practitioners in their respective fields. There are no trainees, associates or juniors. We DO NOT practice on our clients.

SOME COMMENTS FROM OUR CLIENTS

"I thought it was impossible to make good security so architecturally acceptable and almost invisible".

"The IT Security Review and the VPN Review saved us SR9,000,000 on our previous solution".

"After reviewing the security of the Crown Jewels it must be all downhill from there?"

"Simply the best IT Security Course I've ever been on".
